## 1.- Which of the following Java operators can be used with boolean variables? (Choose all that apply.)

Opciones: 1. ==

- 2. +
- 3. –
- 4.!
- 5. %
- 6. <=
- J. **\**-
- 7. Cast with (boolean)
- 1.El operador == puede usarse tanto como con primitivos y objetos y retorno un true o false.
  El operador ! al igual que el operador == retorna un true o 2.false por lo que se puede usar con variables boolean 3.Si es algún tipo de dato que pueda ser casteado a boleano debería funcionar, pero debe ser un dato que pueda ser casteado.
- 2.- What data type (or types) will allow the following code snippet to compile? (Choose all that apply.)

```
byte apples = 5;
short oranges = 10;
bananas = apples + oranges;
```

Opciones: 1. int

- 2. long
- 3. boolean
- 4. double
- 5. short
- 6. Byte.

El tipo de dato de apples y oranges cambia al realizar la operacion por lo que despues de la operacion se regresa como int, a los tipos int, long y double se les pueden asignar datos enteros (en doouble imprimiria con x.0), los demas tipos no son compatibles

## 3.- What change, when applied independently, would allow the following code snippet to compile? (Choose all that apply.)

```
long ear = 10;
int hearing = 2 * ear;

Opciones: 1. No change; it compiles as is.
    2. Cast ear on line 4 to int.
    3. Change the data type of ear on line 3 to short.
    4. Cast 2 * ear on line 4 to int.
    5. Change the data type of hearing on line 4 to short.
    6. Change the data type of hearing on line 4 to long.

la 1 y 5 no son validos porque el rango de los tipos no es compatible
```

## 4.- What is the output of the following program?

```
1: public class CandyCounter {
      2:
             static long addCandy(double fruit, float vegetables) {
      3:
             return (int)fruit+vegetables;
      4: }
      5:
      6: public static void main(String[] args) {
             System.out.print(addCandy(1.4, 2.4f) + "-");
      7:
             System.out.print(addCandy(1.9, (float)4) + "-");
      8:
      9:
             System.out.print(addCandy((long)(int) (short)2, (float)4)); } }
Opciones:
      1. 4-6-6.0
                                el casteo de la linea 3
                                no dejaria compilar el
      2. 3-5-6
                                programa
      3. 3-6-6
```

- 4. 4-5-6
- 5. The code does not compile because of line 9.
- 6. None of the above

# 5. What are the unique outputs of the following code snippet? (Choose all that apply.)

```
int a = 2, b = 4, c = 2;
System.out.println(a > 2 ? --c : b++);
System.out.println(b = (a!=c ? a : b++));
System.out.println(a > b ? b < c ? b : 2 : 1);</pre>
```

Opciones: 1.1

- 2. 2
- 3.3
- 4. 4
- 5. 5
- 6.6
- 7. The code does not compile

## 6. Given the following code snippet, what is the value of the variables after it is executed? (Choose all that apply.)

## 7. What is the output of the following code snippet? (Choose all that apply.)

- 4. A NullPointerException is thrown at runtime.
- 5. The code will not compile because of line 7.
- 6. The code will not compile because of line 8.

## 8. Which statements, when inserted independently into the following blank, will cause the code to print 2 at runtime? (Choose all that apply.)

7. None of the above, as the code contains a compiler error

### 9. What is the output of the following code snippet?

```
2: boolean keepGoing = true;
      3: int result = 15, meters = 10;
      4: do {
      5:
             meters--;
      6:
             if(meters==8) keepGoing = false;
      7:
             result -= 2;
      8:
             } while keepGoing;
      9: System.out.println(result);
Opciones: 1.7
          2.9
          3.10
          4. 11
          5.15
          6. The code will not compile because of line 6.
          7. The code does not compile for a different reason.
```

## El keepgoing de la linea 8 debe ir en parentesis

## 10. What is the output of the following code snippet? (Choose all that apply.)

```
9: int w = 0, r = 1;

10: String name = "";

11: while(w < 2) {

12: name += "A";

13: do {

14: name += "B";
```

```
15:
                   if(name.length()>0) name += "C";
      16:
                   else break;
      17:
             } while (r <=1);
      18:
             r++; w++; }
             System.out.println(name);
      19:
Opciones: 1. ABC
          2. ABCABC
          3. ABCABCABC
          4. Line 15 contains a compilation error.
          5. Line 18 contains a compilation error.
          6. The code compiles but never terminates at runtime.
          7. The code compiles but throws a NullPointerException at runtime.
```

### 11. What is output by the following code? (Choose all that apply.)

```
1: public class Fish {
2:
       public static void main(String[] args) {
3:
             int numFish = 4;
             String fishType = "tuna";
4:
5:
             String anotherFish = numFish + 1;
             System.out.println(anotherFish + " " + fishType);
6:
             System.out.println(numFish + " " + 1);
7:
8: } }
Opciones: 1.41
          2.5
                                      en la linea 5 no es posible
          3. 5 tuna
                                      hacer eso sin castear el
          4. 5tuna
                                      int a string
          5. 51tuna
          6. The code does not compile.
```

### 12. What is the result of the following code?

```
7: StringBuilder sb = new StringBuilder();
8: sb.append("aaa").insert(1, "bb").insert(4, "ccc");
9: System.out.println(sb);
```

Opciones: 1. abbaaccc

- 2. abbaccca
- 3. bbaaaccc
- 4. bbaaccca
- 5. An empty line
- 6. The code does not compile.

primero escribe a luego inserta bb en la posicion 1 sel string, luego escribe otro a, luego inserta ccc en la posicion 4 finalmente imprime el ultimo a = abbaccca

## 13. What is the result of the following code?

```
12: int count = 0;
13: String s1 = "java";
14: String s2 = "java";
15: StringBuilder s3 = new StringBuilder("java");
16: if (s1 == s2) count++;
17: if (s1.equals(s2)) count++;
18: if (s1 == s3) count++;
19: if (s1.equals(s3)) count++;
```

```
Opciones: 1. 0
2. 1
3. 2
4. 3
5. 4
6. An exception is thrown.
7. The code does not compile.

Al if de la
linea 18 le
faltan corchetes
del if
```

#### 14. What is the result of the following code?

```
public class Lion {
      public void roar(String roar1, StringBuilder roar2) {
            roar1.concat("!!!");
            roar2.append("!!!");
      }
      public static void main(String[] args) {
             String roar1 = "roar";
             StringBuilder roar2 = new StringBuilder("roar");
             new Lion().roar(roar1, roar2);
            System.out.println(roar1 + " " + roar2);
}}
Opciones: 1. roar roar
                                              sring 1 es una variable
          2. roar roar!!!
                                              inmutable por lo que no
          3. roar!!! roar
                                              se le agrega el valor
                                              de !!!, String roar 1
          4. roar!!! roar!!!
                                              no se modifica, roar2
          5. An exception is thrown.
                                              es StringBuilder
          6. The code does not compile.
```

# 15. Which of the following can replace line 4 to print "avaJ"? (Choose all that apply.)

```
3: var puzzle = new StringBuilder("Java");
4: // INSERT CODE HERE
5: System.out.println(puzzle);

Opciones: 1. puzzle.reverse();
2. puzzle.append("vaJ$").substring(0, 4);
3. puzzle.append("vaJ$").delete(0, 3).deleteCharAt(puzzle.length() - 1);
4. puzzle.append("vaJ$").delete(0, 3).deleteCharAt(puzzle.length());
5. None of the above

La 4 se pasa del rango porque deberia ser el rango menos 1 como en la 3, la
2 no es porque agrega las lineas pero no borra las demas
```
